

Protect Your Home From Wildfire

**Your Home...Your Dreams...
What you do today...
May protect your home tomorrow!**

Flying embers and creeping ground fires may ignite your home in a wildfire. You can help your home survive wildfire.

Reduce home and structure flammability:

- Screen all openings, such as attic vents and areas under stairs or decks, with 1/8 inch non-corrosive metal mesh.
- Use fire resistant roofing such as tile, composition, shingles or metal.

Reduce ignitable fuels around your home:

- Remove all dead plants, trees, branches, and debris within 30 feet of your home.
- Remove limbs hanging over your roof.
- Store firewood 30 feet from your home.
- Remove needles and leaves from gutters, roofs and decks.
